

## Suppression of aneuploidy by caspase-2

### Abstract:

Caspase-2, the most evolutionarily conserved member of the caspase family, has redundant function in cell death during development. Our recent work suggests that caspase-2 is tumour suppressor as caspase-2 deficiency enhances tumourigenesis in several mouse models. Interestingly caspase-2-deficient tumours always show enhanced chromosomal instability (CIN) and aneuploidy. Increased CIN and aneuploidy are also characteristics of caspase-2-deficient mouse embryonic fibroblasts in culture as well as human tumour cells with *CASP2* gene knockout. We further found that caspase-2 is required for apoptotic deletion of cells carrying mitotic defects. Thus apoptotic activity of caspase-2 is necessary for deleting cells with CIN to limit aneuploidy and we propose that this is linked to the tumour suppressor function of caspase-2. Other recent studies have suggested that in response of cytokinesis failure caspase-2-mediate cleavage of Mdm2 that results in p53 stabilization and cell cycle arrest, thus preventing polyploidy. It is therefore possible that caspase-2 is involved in two checkpoints, one leading to apoptosis of cells with CIN and the other, cell cycle arrest following cytokinesis failure. We are now investigating how caspase-2 senses mitotic errors and becomes activated and how is such activation regulated.

### Speaker:

**Sharad Kumar AM**  
**MSc, PhD, FAA, FAHMS.**

Professor  
 Co-Director, Centre for Cancer Biology  
 University of South Australia and SA Pathology  
 NHMRC Senior Principal Research Fellow  
 Chair of Cancer Biology & Research Professor  
 of Cell Biology  
 University of South Australia

### Date:

**5 July 2019**  
**(Friday)**

### Venue:

**Meeting Room 7C,**  
**Level 7**

Duke-NUS Medical School  
 8, College Road,  
 Singapore 169857

### Time:

**12:00 - 1:00 p.m.**

### Host:

**Kanaga Sabapathy**

Professor  
 Cancer & Stem Cell Biology  
 Duke-NUS Medical School  
 Head and Principal Investigator  
 Division of Cellular & Molecular  
 Research  
 National Cancer Centre  
 Singapore

**Prof. Sharad Kumar** is a Senior Principal Research Fellow of the NHMRC Australia, a Co-Founder and Co-Director of the Centre for Cancer Biology, a Professor of Cell Biology and the Chair of Cancer Biology at the University of South Australia and an Affiliate Professor of University of Adelaide. His laboratory has made a number of discoveries in cell death and ubiquitination fields relevant to multiple diseases. He is a Fellow of the Australian Academy of Science (FAA) and the Australian Academy of Health and Medical Sciences (FAHMS). He has been recognised through several awards including the ASBMB Lemberg Medal, the FAOBMB Research Excellence Award, the ANZSCDB President's Medal and appointment to the Order of Australia. He has published 255 articles with >31,000 citations and H index of 86.

**No registration is  
 required.**

**All are welcome.**
